

SARTHAK DHANOTIYA

Java Backend Engineer

sarthakdhanotiya44@gmail.com | +91-7617283833 | LinkedIn

PROFESSIONAL SUMMARY

Java Backend Engineer building microservices for a multi-tenant B2B SaaS HR and recruitment platform using Spring Boot, Spring Cloud Gateway (WebFlux), PostgreSQL, Kafka and Redis. Experienced in gateway-level JWT security, organization-scoped authorization, event-driven design and caching, with working knowledge of JWKS-based token verification (RS256, ES256). Familiar with Meta messaging integrations (WhatsApp, Instagram, Messenger) and currently building hands-on depth in CI/CD, Docker and Kubernetes.

TECHNICAL SKILLS

Languages: Java, SQL, JavaScript

Backend & Frameworks: Spring Boot, Spring Cloud Gateway (WebFlux), Spring Security, Spring AOP, JDBC, RESTful APIs

Security: JWT, JWKS, RS256, ES256, Role-Based and Organization-Scoped Authorization

Architecture: Microservices, Event-Driven Design, Multi-Tenancy, Layered Architecture (MVC)

Messaging & Real-Time: Kafka, Redis Streams, Server-Sent Events (SSE), WebSocket

Databases & Caching: PostgreSQL, MySQL, Redis

Integrations: WhatsApp, Instagram and Messenger (Meta platforms) – familiar

Tools: Git, Maven, Postman, Swagger, Eureka

Currently Learning: CI/CD (Jenkins, GitHub Actions), Docker, Kubernetes

PROFESSIONAL EXPERIENCE

Java Backend Engineer | HTI Infosystems

2025 – Present

- Design and develop core microservices (application, candidate and recruitment) for HRIMS, a multi-tenant B2B SaaS HR and recruitment platform, using Spring Boot, PostgreSQL and Kafka.
- Built recruitment pipeline management with stage transitions, offer-lifecycle state machines, SLA breach detection and automated stage-entry actions (email, recruiter notification, tagging).
- Implemented organization-scoped Redis caching with composite keys and a shared cache-key builder utility; built Redis Streams-based event publishing to synchronize security state across services.
- Established the gateway security pipeline: JWT validation and trusted-header injection at Spring Cloud Gateway, with AOP-driven role and organization-membership authorization in downstream services.
- Built GDPR-compliant candidate data flows (erasure requests, consent tracking, pseudonymization) and a database-driven, organization-scoped email templating system.
- Debugged production issues across the gateway, caching and messaging layers; familiar with the team's CI/CD delivery flow and actively learning pipeline design.
- Familiar with WhatsApp, Instagram and Messenger integrations, including webhook handling and live-chat message flow.

Java Intern | Elegance

Apr 2025 – Jul 2025

- Implemented JDBC-based CRUD operations for data-driven application modules.
- Developed servlets to handle HTTP requests, session management and form processing.

Backend Developer (Intern) | Techmaa IT Services, Noida

Jan 2025 – Feb 2025

- Designed and implemented RESTful APIs for a Hospital Management System covering patients, doctors, appointments and billing, using a layered Controller–Service–Repository architecture.
- Implemented CRUD operations, request validation and error handling; integrated the database layer via JDBC and tested endpoints using Postman and Swagger.

PERSONAL PROJECT

Medicine Chai – Full Stack Web Application

React, Spring Boot

- Built a mobile-friendly ordering application with cart management and dynamic UI in React, backed by Spring Boot REST APIs with JSON and CORS-based frontend integration.

EDUCATION

Bachelor of Technology (B.Tech), Computer Science | Medi-Caps University, Indore

2025
